Recent hazard events in Niagara County underscore the need for the community to work together to reduce the impacts of future hazards, as proven by flash flooding, rising lake levels, and the pandemic. To plan effective strategies that limit the damage of future hazards in Niagara County, we need to hear from you.

We'd like you to join a **Community Kick-off Meeting on October 27th at 6:00pm** to launch the hazard mitigation planning process.

Niagara County is launching a process to update its Hazard Mitigation Plan. FEMA requires counties to update HMPs every five years in order for local jurisdictions to receive federal funding for hazard mitigation projects. For this HMP update, Niagara County is partnering with the University at Buffalo Regional Institute (UBRI) and the School of Architecture and Planning.
